

Infinity Pools

Crystal Clear Water Features

Classification of concrete pools based on the edge type .

www.infinity-pools.net

Skimmer Pools

The water level is slightly below the pool edge. Water filtration cycle flows through specific points called “Skimmers”.

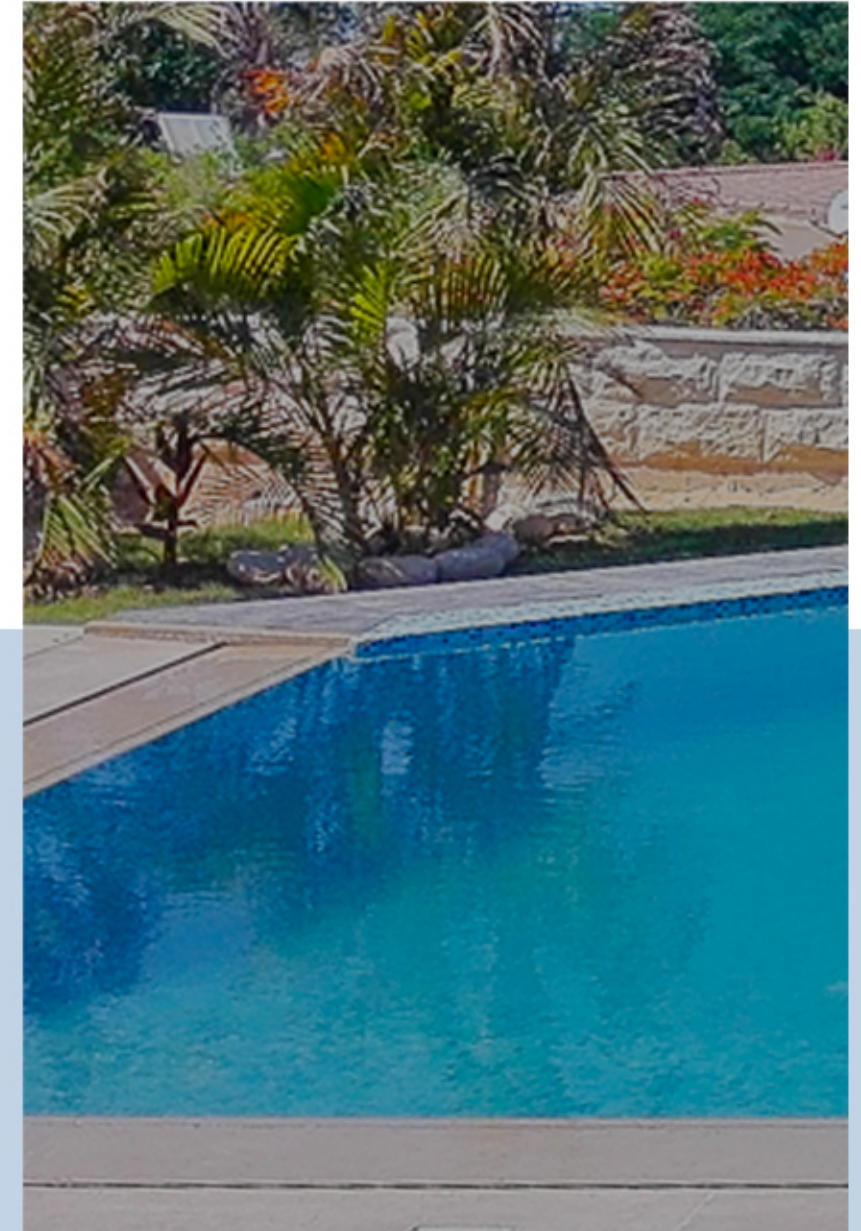

Overflow Pools

The water level is at the same level of the pool perimeter. Water filtration cycle flows over the pool edge.

Overflow Edge Types

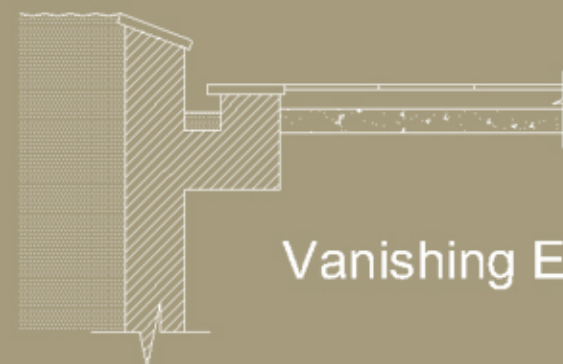

Blended

Zero Interior

Raisd Blended

Vanishing Edge

Infinity Pools

Blended Pool

The pool blends in its landscape as most of the drain gutter is invisible under the surrounding flooring. The inner gutter wall is still visible under the flowing water.

Zero Interior Blended Pool

The inner gutter wall is tapered down allowing the surrounding flooring to overlap it and letting only the 3-4 cm needed for the water to flow into the gutter.

Raised Blended Pool

The inner gutter wall is raised from the surrounding landscape, which makes a water fall around the pool edge. The rest of the gutter is invisible under the surrounding flooring to blend the pool in the landscape.

Vanishing Edge Pool

The inner gutter wall is raised from the surrounding landscape with the desired height and the top surface is tapered down, that makes the water vanish at the desired side as the top surface is not visible from inside.
